

KineticD™ sets a new standard by providing small and mid-sized businesses (SMBs) with the same level of service and protection for irreplaceable digital assets that large enterprises enjoy. KineticSecure™ and KineticExtend™ are comprehensive cloud-based solutions that enable small and mid-sized businesses (SMBs) to continuously backup, restore, access, and share information online from any location.

## Kinetic Secure

As business information and assets become increasingly digital, there is a rapid growth in data, drives and devices. Protecting these assets for disaster recovery has become more important than ever before. The KineticSecure active data backup & recovery service provides businesses with the assurance they need to guard against computer hard drive failure or theft.

With KineticSecure, users can easily backup, access, share and recover online digital assets using either a Windows PC or Mac client including:

- **Continuous Backup** - Unlike other online backup services, our patented Continuous Backup™ technology immediately detects, encrypts and automatically saves incremental changes.
- **Easy-to-use** - No tasks for you to remember, such as uploading changes or initiating back-up. Just set it up and then sit back and relax.
- **Simple Rate Plan** - Just \$2/GB. No hidden fees, no license fees. Back up as many computers as you want under the same, low monthly rate.
- **Open Files Driver** - Most backups don't protect open files. This feature does just that. Perfect for files left open for lengthy periods in apps such as Outlook, QuickBooks or "always-on" servers.
- **Suspend and Resume Backups** - Backup suspends when you're typing, resumes when you're not – so you're never slowed down.
- **Access Backed Up Data Anywhere** - Wherever there's an internet connection, you're a click away from any of your backed-up data.
- **Sharing** - Send someone a special password allowing them access to just the files you want them to have. And imagine the convenience of sending a link to access large files – photos, for example – rather than jamming someone's inbox.
- **Secure Bank Grade Encryption** - This is the strongest encryption available. It has never been cracked. So you can rest easy that your valuable data is safe.
- **Fast Recovery** - We assume you need that file or folder back instantly. With our smart features, you're just a few short clicks away from recovering it. And our Web Carts make the entire process even faster by allowing you to collect multiple files, folders and/or systems into a single 'cart' for easy downloading.
- **File Versioning** - We keep multiple versions of every saved file, so you can restore older or deleted versions of your files.

Wherever business takes you.

## System Requirements

Back up from any PC or Mac. In fact, back up from both on the same account.

### For Windows Systems

KineticSecure was designed to work on a wide range of Windows PCs. Anything from Windows 95b all the way up to Windows XP, 2003 Server, 2008 Server and Windows 7 are supported.

Operating Systems: Windows 2008, Windows 7, Vista, XP, 2000, Me, 98, NT, 95

Processor: Pentium 4 @ 1.7 GHz

RAM: 1 GB RAM (512 MB minimum)

Hard Drive Space: 5 GB free

Our software has been tested to work on the minimum configuration recommended by Microsoft for each version of Windows. If you are happy with the performance of your system today, rest assured that the backup will not degrade your performance.

### No high speed? No problem.

Though backups work best on a high speed Internet connection, it's not required. In fact, many customers are totally satisfied using KineticSecure on dial-up or accelerated dial connections.

### Older System? Don't worry.

The KineticSecure client is small and efficient, so it can run easily on older systems.

### Designed for firewall compatibility

KineticSecure was also designed to be compatible with home and office hardware firewalls. To a firewall it just looks like a web browser. Or, put another way, if your PC can surf the web you should have no trouble using our backup service.

Wherever business takes you.

or call 1.866.430.2406 (toll free) or +1.416.203.2406

### For Windows Systems

Operating Systems: Mac OS X Leopard 10.5.7

Processor: 1.5 GHz PowerPC G4 or Intel CPU

RAM: 512 MB

Hard Drive Space: 5 GB free

Our software has been tested to work on the minimum configuration recommended by Apple. If you are happy with the performance of your system today, rest assured that the backup will not degrade your performance.
